Abstract

The aircraft industry in Indonesia has experienced significant development and growth along with research on aeronautics. Indonesia already has facilities and infrastructure in order to grow the aviation industry, one of which is the National Aeronautics and Space Institute (LAPAN). The LAPAN Aviation Technology Center (Pustekbang) is a national aviation institution that has aircraft facilities as a product of design, engineering and use activities in the field of aircraft technology. As an institution that is not a ministry, it has the main task of designing and developing in the field of aviation technology.

Keywords: Aviation industry, competence, task mapping, work structure, management
